

milton

Launch Roadmap — Click by Click

From this moment until consumers download Milton Nation from the App Store.

CURRENT STATE

- ✓ Build 10 on TestFlight, installed on your iPhone
- ✓ Production Supabase cleaned: zero mock posts, zero test users
- ✓ All 8 production accounts have password **Milton2026!**
- ✓ Your account: **ezra@miltonrecovery.com** · phone +1 (201) 747-7727
· role **alumni** (for dress rehearsal)
- ✓ 247 / 247 tests passing

Estimated time to public launch: 10–14 days.

Phase Overview

What's left, in order

Phase	What you do	Duration
0	Approve email design, send Twilio BAA, log into Twilio, retry SMS	~60 min today
1	Register A2P 10DLC Brand + Campaign (Twilio)	10 min you + 1–3 day Twilio wait
2	Dress rehearsal: sign up second phone as real alumni, approve, use for 24–48h	~20 min active + 2 days passive
3	Code updates from rehearsal findings (Claude handles)	depends on findings
4	Archive Build 10 in Xcode → upload to ASC → fill review form → Submit	~30 min you + 24–48h Apple
5	Apple approves → confirm BAA signed → flip bypass off → smoke test → click Release	~15 min
6	Day-1 monitoring (Supabase Auth, Edge logs, App Store reviews, crisis pushes)	passive 48h

CRITICAL PATH BOTTLENECK

Two slow items run in parallel:

- **Twilio BAA** — 1–2 weeks from when you send the request email
- **Apple Review** — 24–48h from submission (with possible 1–2 day rejection-fix-resubmit)

You'll likely be waiting on Twilio AFTER Apple already approves. That's why we choose **Manually release** in App Store Connect — so the approved build can sit in "Pending Developer Release" until BAA is signed.

0

Today (~60 min)

All 4 steps run in parallel. Don't wait between them.

~60 min

0.1 Decide on the branded welcome email

1 min

1. Open [launch-kit/email-previews/01-CURRENT.pdf](#) (current off-brand version)
2. Open [launch-kit/email-previews/02-PROPOSED.pdf](#) (new branded version with milton wordmark + brand-color band)
3. Reply to Claude: **"approve email"** OR **"keep current"**

If you approve: Claude renames `send-welcome-email/index.ts.proposed` → `index.ts` and runs `supabase functions deploy send-welcome-email`. Takes ~30 seconds. No app rebuild required.

0.2 Send the Twilio BAA email

2 min

1. Open a new browser tab → [console.twilio.com](#)
2. Sign in
3. Top-right corner → click your account name dropdown → **Account info**
4. Copy the **Account SID** (32 chars, starts with `AC`)
5. Open [launch-kit/TWILIO-BAA-SEND-NOW.md](#)
6. Copy the email body
7. Open your mail client (Gmail / Outlook / Apple Mail)
8. New message → To: [privacy@twilio.com](#) → Subject: **BAA Request – Milton Recovery Centers – Account [your SID]**
9. Paste body, fill in the `[PASTE YOUR ACCOUNT SID HERE]` placeholder + business address
10. Send
11. Reply to Claude: **"BAA email sent"**

Why this is urgent: BAA takes 1–2 weeks. Every day you delay sending = 1 day delayed launch. This runs in parallel with everything else. **Send today.**

0.3 Log into Twilio so Claude can audit your account

2 min you + 5 min Claude drives

1. In the Chrome browser tab from Step 0.2 (still on console.twilio.com), confirm you're signed in
2. Reply to Claude: **"logged into Twilio"**
3. Claude will then drive Chrome and check:
 - Account tier (Trial vs Paid)
 - A2P 10DLC Brand registration status
 - A2P 10DLC Campaign registration status
 - Recent Messaging Logs (did yesterday's OTP attempt reach Twilio at all?)
 - HIPAA eligibility flag
4. Claude reports back what's configured and what's missing

Why Claude can't do this alone: Security rule prevents entering passwords on your behalf. Once you're past the login screen, Claude takes over.

0.4 Retry SMS smoke test in TestFlight

3 min

1. Open TestFlight Milton on your iPhone
2. If logged in, Profile tab → scroll down → **Logout**
3. On the login screen:
 - Email: `ezra@miltonrecovery.com`
 - Password: `Milton2026!`
 - Tap **Login**
4. Wait 30 seconds for the 2FA code screen
5. Watch your phone for a real Twilio SMS to +1 (201) 747-7727
6. Reply to Claude with one of:
 - **"SMS arrived"** → Twilio is delivering, we can proceed to dress rehearsal
 - **"No SMS"** → A2P 10DLC is the issue, we register it in Phase 1

What changed since last test: The Edge Function was reading the phone from the wrong column (`profile.phone` instead of `auth.users.phone`). Claude fixed it. So even if you didn't get an SMS yesterday, today might work — OR it might still not work because of A2P 10DLC registration (separate issue handled in Phase 1).

1

Fix SMS Delivery

Likely: A2P 10DLC registration (US carrier requirement)

10 min + 1–3 day wait

Skip this phase if Step 0.4 returned **"SMS arrived"** — you're already good. Otherwise:

BACKGROUND: WHY SMS MIGHT BE SILENTLY DROPPED

US carriers (AT&T, Verizon, T-Mobile) require app-to-person SMS senders to register their "brand" and "campaign" under A2P 10DLC rules. Without registration, carriers **silently drop messages** — no error returned to you, no failed-delivery log. The Edge Function thinks it succeeded; the user just never receives anything. Fix: register the brand + campaign with Twilio, who relays it to the carriers.

1.1 Upgrade Twilio to Paid if on Trial

2 min

1. Twilio Console → left sidebar → **Billing**
2. If banner says "Trial Account" → click **Upgrade**
3. Add payment method (credit card)
4. Confirm upgrade (costs ~\$1, then per-SMS billing at ~\$0.0083 each)

If already paid: Skip this step.

1.2 Register A2P 10DLC Brand

5 min submit · 1–3 days approval

1. Console → **Messaging** (left sidebar) → **Regulatory Compliance** → **A2P 10DLC**
2. Click **Brand Registration** → **Register a new Brand**
3. Brand Type: **Standard Brand** (\$4 one-time)
4. Fill in form (have these ready):
 - Legal company name: *Milton Recovery Centers* (or registered entity name)
 - DBA / Brand name: *Milton Nation*
 - Country of registration: United States
 - Tax ID type: EIN
 - Tax ID number: *[your federal EIN]*
 - Business address: *[your registered business address]*
 - Business website: <https://miltonrecovery.com>
 - Vertical: **Healthcare**
 - Stock symbol: leave blank (private company)
 - Stock exchange: leave blank
 - Brand contact: *Ezra Barishansky*
 - Email: ezra@miltonrecovery.com
 - Phone: [+1 \(201\) 747-7727](tel:+12017477727)
5. Submit → wait for "Verified" status (auto-check returns in 1–3 days)
6. Reply to Claude: **"brand submitted"**

If brand is rejected: Twilio emails you the rejection reason. Usually it's a typo in EIN or business name not matching IRS records. Fix and resubmit (no fee for resubmission).

1.3 Register A2P 10DLC Campaign

5 min submit · instant approval

1. Same page → **Campaign Registration** → **Register a new Campaign**
2. Use Case: **Account Notifications** (or **2FA / OTP**) — these are "low risk", lowest fee
3. Brand: select the Brand you registered in Step 1.2 (must be Verified)
4. Description: *"One-time SMS verification codes for Milton Nation alumni app phone authentication"*
5. Sample messages (paste both):

Your Milton Alumni verification code is: 123456. It expires in 5 minutes. Do not share this code.

Your Milton Alumni verification code is: 987654. It expires in 5 minutes. Do not share this code.

6. Opt-in workflow description:

Users enter their phone number during account signup in the Milton Nation iOS app, agree to terms of service, and request a verification code as part of two-factor authentication.

7. Opt-out:

Users can delete their account at any time via the in-app Settings → Delete Account flow, which removes their phone number from the system.

8. Help message: *"Reply HELP for assistance, STOP to unsubscribe."*
9. Submit → instant approval (assuming brand verified)
10. Cost: ~\$15/month for this campaign type

1.4 Attach campaign to your sending phone number

1 min

1. Console → **Phone Numbers** → **Manage** → **Active Numbers**
2. Click your sending number
3. Scroll to **Messaging** section → **Messaging Service / Campaign**
4. Select the campaign you just registered
5. Save

1.5 Retry SMS smoke test

3 min

1. Repeat Step 0.4 (login to TestFlight with your phone)
2. SMS should now arrive within 30 seconds
3. Reply to Claude: **"SMS works"**

2 Dress Rehearsal

Real consumer flow on TestFlight — second phone signs up as new alumni

20 min active + 2–3 days passive

☐ 2.1 Install Build 10 on second phone

5 min

1. Decide which device will be the "real new alumni": partner's phone, spouse's, colleague's, or a separate device you own
2. From your primary device, App Store Connect → Users and Access → TestFlight → **+ Add Tester**
3. Add the second phone's owner by Apple ID email → assign to your testing group
4. That person receives an email + push notification with a TestFlight invite
5. On the second phone: install **TestFlight** app from the App Store if not present
6. Open the invite email → tap **View in TestFlight** → tap **Accept** → **Install**

☐ 2.2 Sign up as a new alumni from the second phone

5 min

1. Open Milton Nation on the second phone
2. On the login screen, tap **"Don't have an account? Register"** (at the bottom)
3. Fill in the registration form:
 - Full name (real or test name)
 - Username (lowercase, no spaces, unique)
 - Email (any address that can receive mail)
 - Phone (the second phone's real US number)
 - Password (set something strong, you'll need it on every login)
 - Sobriety date (any past date)
 - Discharge date (any past date)
 - Recovery program (pick one)
4. Tap **Submit**
5. Confirmation alert: "Application submitted, awaiting admin approval"
6. Welcome email arrives at the email you entered — **open it and verify branding looks right**

2.3 Approve from admin on your primary phone

3 min

1. On your iPhone, open TestFlight Milton
2. If logged in as alumni-ezra, logout first
3. Login as Florida Admin:
 - Email: `admin@miltonrecovery.com`
 - Password: `Milton2026!`
4. Real SMS OTP arrives at +1 (929) 617-2795 (the admin's attached number)
5. Enter code → Verify → land on admin dashboard
6. You should also have a push notification: **"New Member Request"**
7. Tap Pending Users tab → tap the new signup → review → **Approve** → assign Florida facility
8. Second phone receives push: **"You're Approved!"**

What this proves: Real Twilio SMS for admin login. Real push notification fan-out from new signup. Real Resend welcome email. End-to-end production stack working as a real customer would experience it.

2.4 Use the app as a real consumer for 24–48 hours

passive

1. On the second phone, login with the new account (real email+password+OTP)
2. Walk through every section of `launch-kit/TESTFLIGHT-QA-BUILD-10.md` as the new alumni
3. Create a post in each category
4. Comment + like
5. Open "I'm Struggling Today" → verify the FL/OH numbers dial
6. Open Meetings tab → verify real Milton meetings + nearby BMLT NA meetings show
7. Background the app overnight → reopen the next morning → confirm still logged in
8. Photo upload from Photos library
9. Push notifications wake the app from cold-close

2.5 Document anything broken

passive

1. Keep a note (Apple Notes, sticky note, whatever) of anything that:
 - Crashes
 - Looks wrong / off-brand
 - Doesn't work as expected
 - Feels slow
 - Has typos or weird text
2. When the soak period ends, send the list to Claude
3. Claude cuts Build 11 with fixes if needed

3 Pre-Submission Code Updates

Claude handles all of this — your time: zero

handled by Claude

☐ 3.1 Apply any rehearsal-driven fixes

varies

Claude reviews your Phase 2.5 list, fixes each item in code, runs tests, commits. If anything significant changed, the build is bumped (10 → 11).

☐ 3.2 Deploy branded welcome email (if you approved it in Phase 0.1)

30 sec

```
mv send-welcome-email/index.ts.proposed → index.ts → supabase functions deploy  
send-welcome-email .
```

☐ 3.3 Verify build compiles

2 min

Claude runs `xcodebuild test` against iPhone 16e simulator. All 247 tests must pass. Currently they do.

4 Apple Submission

Archive → upload → fill review form → submit

~30 min + 24–48h Apple wait

☐ 4.1 Tell Claude "ready to submit"

1 sec

Claude then flips `DEMO_BYPASS_ENABLED → true` on Supabase + runs `PHASE-4-RESEED-DEMO-CONTENT.sql` to populate alexdemo's account with 3 sample posts + 1 comment + care team + 1 badge (for the App Reviewer to see a populated experience).

☐ 4.2 Archive in Xcode

10 min

1. Open Xcode → open the Milton Nation Alumni App project
2. Top toolbar device selector → change to **"Any iOS Device (arm64)"**
If Archive is greyed out, this is why
3. Menu: **Product → Clean Build Folder** (⇧⌘K)
4. Menu: **Product → Archive**
5. Wait 3–5 minutes for the build to complete
6. Organizer window opens automatically when done

☐ 4.3 Upload to App Store Connect

5 min

1. In Organizer, select the new archive (top of list, dated today, version **1.0 (10)**)
2. Click **Distribute App** (right side)
3. Choose **App Store Connect** → Next
4. Choose **Upload** → Next
5. Keep distribution defaults → Next
6. Signing: **Automatically manage signing** → Next
7. Review summary → **Upload**
8. Wait for "Upload Successful" toast (~2 min)
9. Close Organizer

4.4 Wait for Apple to process the build

15–30 min

1. Email arrives titled **"Your build has completed processing"**
2. If no email after 30 min: App Store Connect → My Apps → Milton → TestFlight tab → look for Build 10 yellow "Processing" badge
3. If stuck "Processing" > 1 hour, check email for export compliance question (answer "No, does not use encryption other than what's exempt" — Supabase TLS is exempt)

4.5 Fill the App Review form

15 min

1. Open <https://appstoreconnect.apple.com> → My Apps → Milton → **App Store** tab → **Prepare for Submission**
2. Click **+ Build** → select Build 10
3. **Sign-In Required:** ☒ Yes
4. **Demo Account:**
 - User name: appreviewer@miltonrecovery.com
 - Password: [Milton2026!](#)
5. **Notes for Reviewer:** open [launch-kit/SUBMIT-BUILD-10.md](#) Step 4 → copy the entire ````code block```` → paste verbatim
6. **Contact Information:**
 - First name: [Ezra](#)
 - Last name: [Barishansky](#)
 - Phone: [+1 \(201\) 747-7727](#)
 - Email: ezra@miltonrecovery.com
7. **Version Release:** ☒ Manually release this version
CRITICAL: do NOT pick automatic release. This lets you flip DEMO_BYPASS off and smoke-test BEFORE going public.
8. Scroll left sidebar — check for red dots; fix anything required (App Privacy questionnaire, Age Rating, Pricing)

4.6 Submit for Review

1 click

1. Click **Add for Review**
2. Click **Submit for Review**
3. Status changes to **"Waiting for Review"**
4. Reply to Claude: **"submitted"**

Expected timeline: 24–48 hours. You'll get an email when Apple decides.

5

Apple Approves → Release Day

Don't click Release until BAA is signed

~15 min

5.1 Confirm Twilio BAA is signed

1 min

1. Check your email for the signed BAA (Twilio General Counsel countersignature)
2. If you have it: continue to Step 5.2
3. If you don't have it: STOP. Approved app sits in "Pending Developer Release" — you can leave it as long as needed.

Why this matters: Without BAA, every real user signup that sends SMS through Twilio is technically a HIPAA violation. Don't expose strangers to that. Wait for BAA.

5.2 Tell Claude "BAA signed, ready to release"

1 sec

Claude flips `DEMO_BYPASS_ENABLED → false` on Supabase. This kills the demo bypass so it can't be used by anyone who finds the credentials in your launch-kit docs.

5.3 Final real-phone production smoke test

10 min

1. Use the second phone (or a brand-new phone that hasn't signed up before)
2. Open TestFlight Milton (still on Build 10, now production-mode since bypass is off)
3. Try the demo phone: `+15550001234` → confirm it FAILS (proves bypass is off)
4. Sign up as a real new alumni with the second phone's real number
5. Real Twilio SMS arrives
6. Welcome email arrives
7. Admin approves (login on your phone as admin)
8. Second phone logs in with email+password+real OTP
9. Everything works → ready to release

5.4 Click Release in App Store Connect

1 click

1. App Store Connect → My Apps → Milton → your version row
2. Click **Release This Version**
3. Confirm in the dialog
4. App goes live on the public App Store within 2 hours (sometimes 24h)

You did it. Milton Nation is now downloadable by anyone with an iPhone.

6

Day 1 of Public — Watch Carefully

First 48 hours matter most

passive 48h

6.1 Watch new signups in Supabase Auth

check every few hours

1. Open Supabase → Authentication → **Users** tab
2. Each new signup appears as a new row
3. Switch to your admin account on TestFlight → Pending Users → review + approve
4. SLA target: every new signup approved within 1 hour during business hours

6.2 Watch Supabase Edge Function logs

check every few hours

1. Supabase → Edge Functions → click each function → Logs tab
2. Especially: `send-sms-otp` , `verify-sms-otp` , `flag-content`
3. Filter on errors (red entries)
4. If errors appear, send Claude the error message

6.3 Watch Twilio Messaging logs

check every few hours

1. Twilio Console → Monitor → Logs → **Messaging**
2. Filter on status = **undelivered** or **failed**
3. If carriers reject, investigate (usually opt-outs or invalid numbers)

6.4 Watch the inbox for support requests

whenever email arrives

1. Monitor `ezra@miltonrecovery.com` for "I can't log in" / "What's my password" type emails
2. App Store reviews — Apple emails you new ones

6.5 Be on-call for crisis content alerts

always

1. Push notifications fire to your admin device when content is flagged as crisis
2. **Have your phone within reach** the first week, especially evenings
3. When a flag fires, open the admin dashboard, find the post/comment, decide whether to reach out to the user directly via care team chat

This is the most important monitoring task. Real recovery alumni may post real crisis content. A timely response can matter materially.

Quick Reference

Credentials, links, contacts

ALL 8 PRODUCTION ACCOUNTS

Email	Password	Phone	Role
ezra@miltonrecovery.com	Milton2026!	+1 (201) 747-7727	alumni (your acct)
admin@miltonrecovery.com	Milton2026!	+1 (929) 617-2795	admin (FL)
super-demo@miltonrecovery.com	Milton2026!	+15550009999 (fake)	super_admin
appreviewer@miltonrecovery.com	Milton2026!	+15550001234	alumni (Apple Reviewer)
admin@miltonjefferson.com	Milton2026!	— none —	admin (OH)

Emergency	911

VENDOR COMPLIANCE STATUS

Supabase BAA	 Signed (per launch-kit/01)
Twilio BAA	 Not signed — Phase 0.2 is to send the request
Resend	N/A — no PHI in welcome email body, BAA not required

IF YOU NEED TO REACH CLAUDE MID-FLOW

Open the Claude conversation associated with this project and message at any phase boundary. The most useful messages are:

- "approve email" / "keep current"
- "BAA email sent"
- "logged into Twilio"
- "SMS arrived" / "no SMS"
- "brand submitted" / "campaign live"
- "ready to submit"
- "submitted"
- "Apple approved"
- "BAA signed, ready to release"
- "released"
- "first user signed up"
